Basalte Studio/Core

Create:

Create a new project via the "Project/Create/Basalte Core" menu.

Import existing data:

Using drag & drop or the "Projects/Import" menu, you can simply drag an existing project file into the "Projects Local" window.

Edit:

Double-click to automatically start the "Basalte Studio" software. This should have been installed at the original installation location. If it is not installed, you will receive a corresponding message.

Combined project type:

ETS projects can also be attached to this project type.
