

# History

A History is automatically maintained for each project in the repository. You can access this after selecting a project via a button in the "Memory selection" menu or by double-clicking.

A History is created as soon as the project is checked in for the first time. If "Request notes" is selected in the settings, a note about the work carried out is requested when checking in. If something has been entered there, a tick appears in the "Notes" column. These can be viewed by double-clicking again.

The screenshot shows a window titled "Projektmanager Project history: Abendroth, Ellerstadt" with a table of project history entries. The table has columns for Timestamp, User, PC, State, Version, Project ID, Action, and Comment. The entries show a sequence of check-in and check-out operations for various users and PC configurations, with some entries including comments like "Keine Änderungen". A "Close" button is visible at the bottom right of the window.

Timestamp	User	PC	State	Version	Project ID	Action	Comment
