# Notes

Each project has notes in order to have the appropriate documentation for further accesses, special features or the IT network to hand.

These can be opened via a button in the "Project selection" menu and you can store any information that is always taken into account when checking in/out.

It is also possible to open the notes of a checked-in project in read-only mode without having to check it out. You will find a corresponding button for this in the "Memory selection" menu.
