

Overview

The PM manages your SmartHome projects for perfect teamwork and automatically takes care of opening the correct software for editing, preventing simultaneous editing by others and providing all the necessary data and tools as well as notes, documentation and passwords required for the best possible project support. All project data can be stored on central data storage devices such as servers, NAS or cloud (OneDrive/SharePoint/Nextcloud/Dropbox/etc.), which serve as an exchange platform. Up to 10 different central storage locations can be configured and enable customized structuring to suit every company. This also makes it possible to exchange data with other companies. All processes are also recorded in log files and ensure end-to-end traceability.

Main window of the Projektmanager

The screenshot shows the main window of the Projektmanager application. It features a menu bar at the top with 'Project', 'Expert', 'Settings', 'Info', and 'Help'. Below the menu bar is a toolbar with various icons. The main area is divided into two sections. The top section, labeled 'Local', displays a table of projects checked out locally. The bottom section, labeled 'Repository', displays a table of projects available in the central repository. A large HPV logo is visible on the right side of the window.
