Settings

"**Repositories (#1)**" The projects are moved to these folders after being checked in to the respective repository. More on this under "Project sharing".

The repository folder should be a network path or a cloud folder that is set up on all computers.

"**Version statuses repository shelf (#2)**" Determines the number of project versions in the shelf of the repository. This setting is saved in the repository folder and therefore applies globally.

"**Repository name (#3)**" Defines the name of the repository. This is used to the main view and the logs.

"**Licensing (#4)**" Shows whether a license has been purchased/imported for the project manager and how many projects have been activated.
