Telenot compasX

Create:
No direct creation possible. Create a new project using compasX software and continue with the import.

Import existing data:
Using drag & drop or via the "Projects/Import" menu, you can simply drag an existing project file into the "Projects Local" window.

Edit:
Double-click to automatically start the "compasX" software. This should have been installed at the original installation location. If it is not installed, you will receive a corresponding message.
